COVID 19 Questionnaire for Dental Practices

Please circle only one answer. If you are confused, discuss it with your provider.

(7) Have you recently participated in any gathering, meetings, or had close contact with many unacquainted people?

YES NO

If a patient replies "yes" to any of the screening questions, and his/her body temperature is below 37.3 °C (99.14 F), the dentist should defer the treatment until 14 days after the exposure event. The patient should be instructed to self-quarantine at home and report any fever experience or flu-like syndrome to the local health department.

If a patient replies "yes" to any of the screening questions, and his/her body temperature is 37.3 °C (99.14 F) or above, the patient should be immediately quarantined, and the dental professionals should report to the infection control department of the hospital or the local health department.

If a patient replies "no" to all the screening questions, and his/her body temperature is below 37.3 °C (99.14 F), the dentist can treat the patient with extra- protection measures, and avoid spatter or aerosol-generating procedures to the best of their ability.

If a patient replies "no" to all the screening questions, but his/her body temperature is more than 37.3 °C (99.14 F), the patient should be instructed to the fever clinics or special clinics for COVID-19 for further medical care.
